

T-100 Data Terminal

Unique Features

By using the T-100, your scale can print to a wide range of printers that was not possible before.

Most of the scales serial output are not designed to work with label printer or print in customized format. They only print in small prints and fixed generic format that very often do not suit the user needs.

The T-100 works by translating the simple protocol into a customized format, so that you can now print directly to a label or slip printer! The print layout can be designed to your very needs.

- Works with almost all scales (*1) and printer with serial port.
- Now you can add company names, product information, date and time, add lines and boxes, use bold and large fonts and many other effects (*2).
- A keyboard and bar-code (PS/2) scanner can be connected to the T-100 and let the user enter different real-time information.

(*1) Require 'manual print' or 'print at stable' operation.

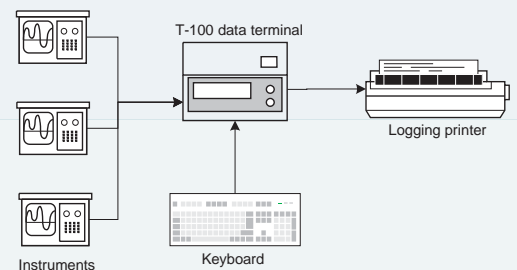

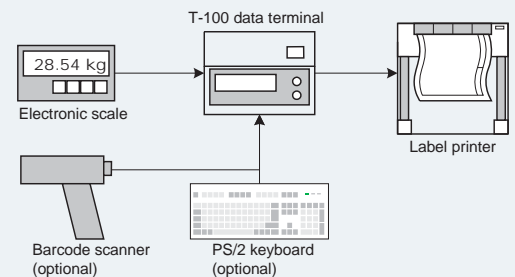

(*2) Print format depends on the capability of the printer and requires programming knowledge from the user.

EZ-2P label printer

Realtime information and data entry

Configuration examples

Other Features

- Four print format can be stored and selected with the selector (D1 to D4)
- Auto weight accumulation (M+ or M-)
- Four additional print format for M+, M-, MC and total weight
